<b>Others</b>
<b>Opticon</b> » OPL-2724

<sup>1</sup> Note that not all possible barcode types supported by the device may be supported by the scanner library.

If a device does not appear in this list it doesn't mean, necessarily, that this device is not able to run Superwaba Virtual Machine. However the device is not covered by the warranty offered in the Professional Subscription Contract. Therefore when any problem is reported in a device out of this list, SuperWaba Ltd have no contractual responsibility and offers no warranty. For this kind of situation we offer our Device Certification Service.

For further information about our Device Certification Service, please contact us.

Important note about Pocket PC devices: the INTEL PXA processor is ARM. Therefore, you must install one of the ARM VMs, usually the POCKETPC or the HPC2000 one.
